

Boarded Control work force

Hello 🙌

I am Precious Badran reaching out to you with a proposal that addresses a pressing issue within our country's borders, specifically focusing on enhancing the Threat Prevention module. Given the challenges at the Mexico–United States border, extending 3,145 kilometers (1,954 miles), our proposal aims to build a comprehensive infrastructure for intake, custody, and family unit processing, incorporating cutting-edge technology and humane considerations.

1. Infrastructure Development:

We propose the creation of a sophisticated intake and custody facility designed to cater to family units, encompassing both males and females. Additionally, our proposal includes a dedicated area for separating children, with a focus on providing adoption support.

2. Advanced Identification System:

To streamline the processing, we plan to implement a state-of-the-art identification system. This includes utilizing blood DNA testing, hand and feet printing, and comprehensive photo documentation, ensuring accurate identification and categorization of individuals.

3. Family Unit Processing:

Adults over 17 will undergo a thorough medical blood testing process, while those aged 17 and younger, without a natural parent, will be placed in a pool for adoption, prioritizing their well-being.

4. Criminal Element Detention:

Recognizing the need for security, we propose the construction of a specialized facility—more akin to a secure prison—to detain individuals with criminal backgrounds. This will enhance overall security while providing an opportunity for rehabilitation.

5. AI Monitoring Center:

A full-scale AI housing and processing center will be established to monitor visual and audio translations. Migrants awaiting processing will be held in a secure environment until their on-site mini court hearings, ensuring efficient case handling.

6. Digital Monitoring and Bracelet System:

Upon approval for release, migrants will be assigned a digital monitoring implant and a bracelet, both manufactured within the USA. This comprehensive system ensures continuous monitoring, promoting compliance with legal requirements.

7. Business Partnership Opportunity:

We are seeking strategic partnerships and investment to bring this comprehensive system to fruition. Our proposal aligns with both security imperatives and humanitarian values, emphasizing family unity and efficient processing.

We welcome the opportunity to discuss this proposal further and explore potential collaboration. Your support in realizing this initiative will undoubtedly contribute to addressing critical border challenges.

Thank you for considering our proposal.

Sincerely,
